

Using Diagnostic Assistant in Cerner

Use this guide to quickly start accessing patient-centric Labcorp data and insights directly in your electronic health record (EHR)

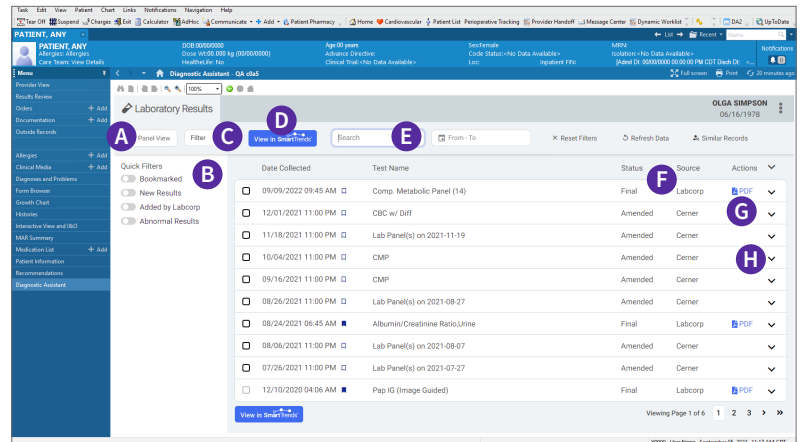

1. Launch Diagnostic Assistant

- A** Access the patient's medical record and click Diagnostic Assistant from the menu on the left.

2. View combined Cerner and Labcorp lab results

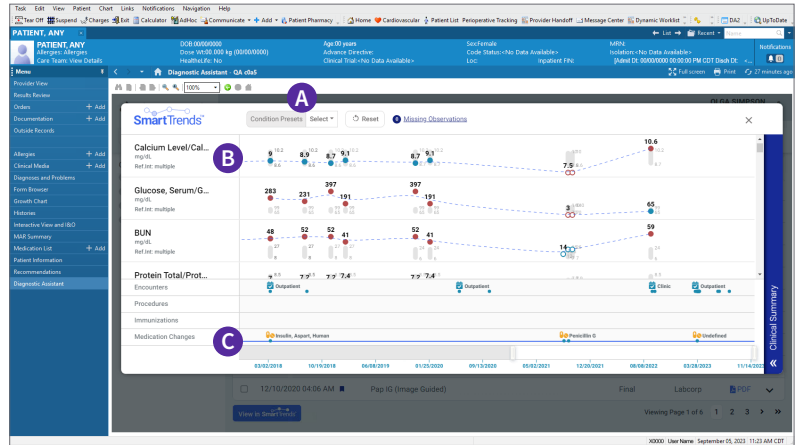

- A** Switch from Panel View to Clinical View. Panel View lists results by date. Clinical View allows you to set a customized view based on clinical groups.
- B** Apply a quick filter to see results that are bookmarked, newly added, added only by Labcorp and/or abnormal.
- C** Build your own custom filters.
- D** See trended lab results by checking the box next to the desired results and clicking SmartTrends.
- E** Search by name, date, ordering provider, performing lab and more.
- F** See the source of the results (Cerner or Labcorp).
- G** View PDFs for Labcorp results.
- H** Expand for more detailed results information.

Using Diagnostic Assistant in Cerner

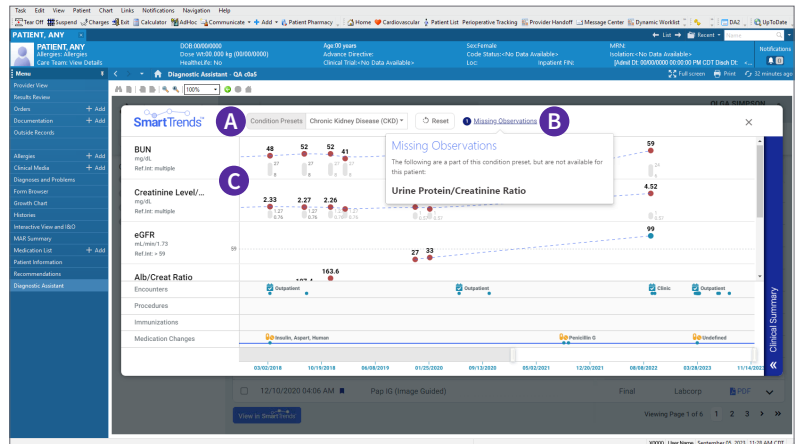

3. Dig deeper with SmartTrends™

- A** Filter lab results based on specific conditions.
- B** Trend lab results on a single line, regardless of performing lab, ordering provider or source (Cerner or Labcorp).
- C** See an integrated view of lab results, vitals, medications and other clinical data across a single timeline.

4. Identify gaps in care based on evidence-based guidelines

- A** From SmartTrends, select the condition.
- B** Click Missing Observations to identify missing tests or other gaps in care.
- C** View lab trends for lab results or vitals based on Cerner and Labcorp data.

For more information, contact your local Labcorp representative.
